Nguyen Phuc Bao Lam (Mike)

github.com/bowber
linkedin.com/in/bowber

With two years of experience in web and game development, I've worked across the stack—from building UIs with React and SolidJS to creating APIs with Axum and Fastify. I enjoy working end-to-end and am looking to grow further as a software developer.

Skills

Programming languages	Rust, Python, TypeScript, JavaScript.
Framework/Library	Axum, Tauri, Express.js, Fastify, Next.js, Flask, React, SolidJS, Three.js.
Databases	SQLite, RocksDB, PostgreSQL, MongoDB, Redis.
Tools	Linux, Git, GitHub Actions, Gitea, Gitlab CI/CD, Docker, K0S, Cilium, Google Cloud Run.
Soft Skills	Problem-Solving, Adaptability, Self-Learning, Teamwork.
Communication	English, Vietnamese (Native).

Experience

Junior Web Developer **March 2023 – February 2025**

Topebox (Onsite)

- Using React/Next.js to develop landing pages for games.
- Using SolidJS to develop web games UI for higher performance.
- Using Three.js for creating 3D scenes in web games
- Building UI from Figma or raw images.
- Building DApps on ETH layer 2, TON network smart contracts.
- Building REST API service for web games.
- Working as a solo frontend developer in most projects.

Projects

Mini Services Runner (MSR) **November 2024 – Present**

github.com/bowber/msr

- A tool to set up the environment for container-based applications. Built with **Tauri, SQLite and SolidJS**.
- Inspired by **Google Cloud Run**.
- This project includes a single desktop app that provides tools to help quickly set up, manage, and maintain an MSR Cluster alongside its services.

MSR Cloud **Work In Progress**

cloud.msrproject.org

- This is a work-in-progress commercial project of myself, which leverages MSR to create multiple clusters for customers to deploy their services easily at low cost.
- It is not yet functional, but it demonstrates my perspective on DevOps and microservices.

axum-db-benchmark **June 2025 – July 2025**

https://github.com/bowber/axum-db-benchmark/tree/sqlite

- This is a benchmark of some DB using **rust + axum + wrk**.
- It helps me compare each DB for architecture decisions later on.
- Each DB benchmark code and result is located in its own branch.

Onchain Clash **October 2023 – June 2024**

youtube.com/watch?v=oBKoEBgOmE0

- A blockchain game built on **Ancient8**, an ETH gaming Layer 2.
- This game has been discontinued, but you can still find the marketing video.
- It can demonstrate my web game development and blockchain skills.

Canvas Image **June 2021 – August 2024**

npmjs.com/package/@bowber/canvas-image/v/latest

- An image interface similar to Python's PIL, based on `HTMLCanvasElement`.
- Initially, this was created mainly for migrating **Rawcutter** from a Python backend to browser-based JavaScript.
- Later on, I used it for Onchain Clash because I needed a library to generate maps from the pixels of an image.

Rawcutter **March 2020 – September 2021**

rawcutter.com

- A simple image processing tool created for manga translation editors.
- This was my first website project, which went through three revisions with three different tech stacks.
- The first version was a **Python Tkinter** desktop app that I built for myself.
- The next version was a server-side app using **Python Flask** with **vanilla JavaScript**, hosted on **Heroku**.
- The latest version is built with **React** and hosted on **GitLab Pages**.

A Self-host Gitea service.
gitea.msrproject.org

- Using **PostgreSQL** as its database.
- This demo shows my basic DevOps skills in **Linux**, **database hosting**, and **TLS management**.

Education

Bachelor of Chemical Engineering, Ho Chi Minh City University of Technology **2021 – Present**

- Though my major is not relevant to the job title, it remains a part of my education.

High School Diploma, Nguyen Huu Huan High School **2018 – 2021**

- Awarded the Silver Medal in the April 30, 2019, Olympiad for Informatics
